Technical Skills

Typescript	PHP	VueJs	jQuery
Python	Git	JavaScript	MongoDB
Angular	Bootstrap	NodeJs	MSSQL
AdobeAnalytics	Nuxt	TailwindCSS	MVC

Professional Experience

American City Business Journals **9/14/2021- Current**
Software Developer **Charlotte, NC**

Coming in as a junior developer and having never worked with Vue.js, I built upon my experiences to establish seniority in my role. As an integral member of the commerce team, I've led and completed several high-impact projects within an Agile environment; coordinating with stakeholders as needed.

- Developed a Single Page Application using Vue.js to support commerce on the Bizjournals platform. Used in-house APIs, a third-party subscriber management platform, a PHP backend, and a Vue.js frontend to support smooth commerce operations for users.
- Integrated both PayPal and ApplePay in the commerce portion of the Bizjournals website. This provided Bizjournal users with secure payment options and significantly increased conversions and revenue for the business.
- Developed several UI features including a scrollable image gallery, data-driven pie chart, and content card modules using Tailwind CSS, Vue 3, Nuxt.js, and D3.js.
- Increased user engagement by 30% by developing an embedded audio feature on articles across the Bizjournals site. This gave users the option to listen to or preview articles

CMHWorks **3/21/2021 - 8/31/2021**
Software Developer **Remote**

I was brought on as a contractor to work on data-intensive reporting software. I sought to improve the software by fixing bugs, refactoring poor-performing SQL queries, and creating application features that would simplify the user experience. I came away knowing how to dive into large code bases with ease and how to break difficult problems into manageable parts

- Helped to overhaul the data access layer of the CMH software through Cube.js middleware in order to improve software performance.
- Developed a CSV download feature within CMHWorks Audit-Pro software using object-oriented programming, C#, TypeScript, and AWS Lambda. This feature allows users to download custom reports by querying a cloud-hosted database.
- Participated in a complete refactor of reporting software by breaking report features and interactive graphical UI's into modularized Angular components and applying dynamic filtering logic for large data sets using RxJS.

Search Peak Inc **3/1/2020 – 3/15/2021**
Web Developer **Remote**

I was excited to use the HTML, CSS, and JavaScript skills I was learning to contribute to real-world projects. This opportunity taught me how web projects are structured and how to implement mobile responsive design.

- Implemented custom frontend design of web projects on WordPress sites through theme installation, customized site files, and routine maintenance on multiple insurance sites

The Plant Guys   9/1/2017 – 2/15/2021
Crew Leader and Laborer   Charlotte, NC

Led and participated in several landscaping installation and renovation projects across the Charlotte region. Day-to-day functions included working with a team to install and/or demolish plants, trees, and shrubs in order to carry out complex landscape renovations. Regularly Advised homeowners on plant care, plant maintenance, and drainage solutions. Also performed hardscaping, drainage work, and pruning of existing shrubs as needed.

Education

Simmons University   **Expected May 2025**

Bachelor of Science, Computer Science   Boston, Massachusetts

UNCC Coding Bootcamp   **March 2021**

Full-Stack Web Development   Charlotte, NC
